

DECISION TOOL • COMPARE UP TO FIVE

The AI Use-Case *VALUE* Scorecard

The best first AI project is rarely the most futuristic. Score your candidates on the five things that decide whether a use case is worth starting with, and let the numbers argue.

Score each candidate task from **1 to 5** on every criterion, where **5 is always the most favourable for a first project**. Add the five scores for a total out of 25. Higher means a stronger, safer place to start. Then read the warning flags before you commit.

Candidate use case	Value	Activity	Learn.	Uncert.	Ease	/25
1.						
2.						
3.						
4.						
5.						

Value worth if it works • **Activity** how often the task recurs • **Learnability** can your team tell good from bad • **Uncertainty** score high when it is low-risk and errors are easy to catch • **Ease** how simply it stands up on tools you already have.

WHAT EACH SCORE MEANS

Value: **1** hard to name a benefit; **5** a clear, statable prize (hours into fee-earning work, faster turnaround, errors avoided).

Activity: **1** happens rarely; **5** a high-frequency task, so the benefit compounds and the team gets many reps to learn.

Learnability: **1** "good" needs years of judgement to assess; **5** good output is knowable and quick to check.

Uncertainty: **1** complex, contested, errors are costly and hard to spot; **5** sits inside the technology's strengths and a mistake is caught easily and cheaply.

Ease: **1** needs new systems, data access or sign-off; **5** runs on tools the team already opens, with little change.

READING THE TOTAL

Below 12

Not your first project. Park it and revisit once you have learned more.

12-18

Workable. Look hard at the lowest score before you commit, that is your risk.

19-25

A strong first candidate. Frequent, checkable, low-stakes and easy to stand up.

WARNING FLAG

A candidate scoring **5 on Value but 1-2 on Uncertainty or Learnability** is the seductive, brittle project, the one that impressed the room and will quietly teach your team that AI overpromises. High value alone is not enough. Favour the balanced score.

RECOMMENDATION

We will start with:

Because (the prize, in a sentence):
