

SELF-ASSESSMENT • ABOUT 10 MINUTES

The AI Leadership Literacy *Self-Assessment*

AI literacy is not knowing every tool. It is the durable judgement that sits above any tool. Score yourself honestly across the five parts below, total it up, and read where you stand.

HOW TO USE

Score each statement from **1 (not true)** to **5 (very true)**. There are 15 statements, so the total runs from 15 to 75. Add up your score and read your band on page two.

1 Capability: *what the technology can do*

I can describe, in plain terms, two things current AI tools are reliably good at and two they are not. 1 2 3 4 5

I treat confident-sounding AI output as a draft to be checked, not an answer to be trusted. 1 2 3 4 5

I understand why an AI tool can be fluent and wrong at the same time. 1 2 3 4 5

2 Application: *where it is genuinely useful*

I can name a specific, recurring task in my own work where AI clearly helps. 1 2 3 4 5

I can name a task where I have decided AI should not be used, and explain why. 1 2 3 4 5

When I weigh a new use, I start from the work it improves, not from the tool. 1 2 3 4 5

3 Evaluation: *how outputs are judged*

For the AI-assisted work I rely on, I know what “good” looks like and how to check it. 1 2 3 4 5

Someone in my team can reliably tell strong output from merely plausible output. 1 2 3 4 5

We have at least one deliberate check in the workflow before AI-assisted work goes out. 1 2 3 4 5

1 not true • 3 partly true • 5 very true. Be honest; this is for you, not for show.

4 Accountability: *who remains responsible*

For important AI-assisted decisions, it is clear who signs off and who carries the risk.

1

2

3

4

5

I can name decisions in my area that should never be made by AI alone.

1

2

3

4

5

If AI-assisted work went out with an error, I know who would be answerable for it.

1

2

3

4

5

5 Adaptation: *how you keep learning*

I use AI tools on my own real work often enough to keep my judgement current.

1

2

3

4

5

I have changed my mind about what AI is good or bad at within the last few months.

1

2

3

4

5

I have a simple habit for keeping up as the tools change.

Your total

out of 75

WHAT YOUR SCORE MEANS

15-34

Early

You know AI matters but the judgement is still forming. Start by using one tool on one real task, deliberately.

35-54

Developing

You have real footing in some parts and gaps in others. Your lowest-scoring part is your next move.

55-75

Confident

You can lead AI decisions on judgement, not hype. The work now is keeping it current and spreading it.

Look past the total. Add up each part separately too. The part where you scored lowest, capability, application, evaluation, accountability or adaptation, is the most useful place to spend your next hour. A high total with one weak part is still a real exposure.
