

FOR LEGAL & RISK-AWARE PROFESSIONAL SERVICES

Useful speed, with *verification* built in.

For partners and directors: use AI for preparation, drafting support and internal knowledge work — with confidentiality, accuracy and professional judgement kept firmly in view.

Designed for leaders. Beyond day-to-day skills, you'll build the understanding to see what AI means for your role, your people and your business model — and develop your own AI vision and action plan for the firm.

WHERE IT HELPS, DAY TO DAY

- **Client preparation** — organise background, context and questions faster.
- **First drafts** — get structure and language moving, then apply expert review.
- **Knowledge-sharing** — make internal expertise easier for the team to draw on.
- **Risk judgement** — set plain-English boundaries on data, verification and use.

Guardrails before shortcuts

The useful question is not whether AI can produce words. It is whether the work is verified, confidential and fit for the professional standard clients expect. Lessons make the boundary practical, not theoretical.

Taught and advised leaders at **Google, Microsoft, SAP, Adobe** and **Vodafone**. Writing on AI in **Fast Company** and **The Guardian**.
