

FOR PROPERTY & REAL ESTATE LEADERS

More time with clients. Local judgement *kept yours.*

For principals and managers in estate agencies, surveyors and property firms: use AI to move faster on the routine work, and keep the local judgement clients value.

Designed for leaders. Beyond day-to-day skills, you'll build the understanding to see what AI means for your role, your people and your business model - and develop your own AI vision and action plan for the firm.

WHERE IT HELPS, DAY TO DAY

- **Listings & particulars** - first drafts of listings and brochures in your firm's voice.
- **Market research** - comparables, local trends and area briefs in minutes, not hours.
- **Client updates** - vendor reports, chase notes and buyer follow-ups, faster.
- **Internal knowledge-sharing** - turn what your best agents know into something the whole team can use.

Judgement stays in the room

AI is good at the first 80% - the research, the drafts, the chasing. Pricing a property, reading a chain and judging a buyer still come from you. A lesson speeds up the routine so there's more time for the local judgement clients actually pay for - with clear lines on what to keep off these tools.

Taught and advised leaders at **Google, Microsoft, SAP, Adobe** and **Vodafone**. Writing on AI in **Fast Company** and **The Guardian**.
